

SUDEV KUMAR

Full Stack Web Developer

+91-8328847712 | sudevkumar82@gmail.com | Odisha, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Open to relocation and visa sponsorship discussions for roles in the EU.

PROFILE SUMMARY

Full Stack Web Developer specializing in the MERN stack, React/Next.js, and cloud deployment (AWS, Vercel), with a track record of turning technical work into measurable business outcomes — faster sites, higher search visibility, and new revenue channels. Owns features end-to-end, from database schema to deployment.

WORK EXPERIENCE

Full Stack Web Developer — EVFY, Gurugram

2024 – Present | Full-time

- **Rebuilt the frontend UI** in React, Next JS 13 and Tailwind CSS, raising the Lighthouse performance score from 33 to 85+ by optimizing asset loading and render paths.
- **Achieved a 100/100 Google SEO audit score** by restructuring sitemaps, fixing JSON-LD structured data, and integrating Typesense Cloud for faster, more crawlable search.
- **Cut platform-wide search latency** by replacing the default search implementation with Typesense Cloud.
- **Boosted blog engagement** (returning visitors, comment activity) by shipping real-time comments, view counters, and a review system.
- **Launched and managed Google Ads campaigns** with full analytics tracking, opening a new ad-revenue channel.
- **Reduced state-management boilerplate** by migrating the codebase from Redux to Zustand.
- **Accelerated feature delivery** by integrating AI-assisted tooling (GitHub Copilot, ChatGPT) into the daily development workflow, cutting debugging cycles.
- **Improved backend API response times** by managing the Payload CMS backend and querying data directly via Mongoose instead of the Payload API for performance-critical endpoints.
- **Optimized media delivery for SEO by managing image uploads** to AWS S3 and serving them through Cloudflare's CDN, reducing load times and improving crawlability.
- **Owned production reliability end-to-end** by managing full deployment pipelines on Vercel and AWS EC2.

Front-End Web Developer — Freelancing — Goyabooking.com

2025 – Present | Part-time, alongside full-time role

- **Architected and built a flight and hotel booking platform** (React.js, Tailwind CSS) from scratch, integrating live fare APIs across LCC and non-LCC airlines to power real-time search and booking.
- **Extended the platform** with a standalone hotel search and booking flow, mirroring the flight booking architecture for consistency.
- **Prevented lost bookings between sessions** by persisting booking state client-side using Local Storage and Session Storage, without a backend database.
- **Independently deployed and maintained** the platform on Hostinger, delivering 100% post-launch uptime with no dedicated infrastructure support.

SKILLS

JavaScript, React JS, Next.js, Node.js, Express.js, Redux, Zustand, MongoDB, HTML, CSS, Tailwind CSS, Typesense Cloud, AWS EC2, Vercel, GitHub, TypeScript, Jest, Docker

Currently expanding proficiency in TypeScript, automated testing (Jest), and containerization (Docker).

EDUCATION

Master of Computer Applications — Mansarovar Global University, 2022 – 2024

Bachelor of Computer Applications — Utkal University, 2017 – 2020

LANGUAGES

English, Hindi, Odia
